

Next Frozen Bovine Semen Importation to be Packaged and Shipped in Goblets and Cane

Dr. Johnny P. Abilay, DOST-NDA Balik-Dairy Scientist Awardee, proposes that the next batch of frozen bovine semen importation be packed in goblets and canes instead of in bulk. . This method guarantees the efficient use and utilization of semen being shipped to different areas and distributed to Artificial Insemination (A.I.) Technicians in the field.

Advantages of frozen semen packed in goblets and canes are:

1. Promote proper and ease of identification, inventory control and shipment;
2. Minimizes deterioration or loss in semen quality due to multiple and/or improper handling;
3. Prevents semen mis-identification in the field and,
4. Used goblets and canes can be saved, sanitized and re-used in packaging locally processed semen.
